# Cognizant – upGrad Training Program uGE_.DOTNET FSD(Python)

## Week 10 Document

**Name:** Adapa Krishna Prasad | **Email:** krishnaprasadadapa912@gmail.com | **Batch Name:** B1_Python | **Faculty:** Kunal

---

Date: 17/04/2026

**Scenario 1**
A company employee arrives at office and cannot access email, Teams, or VPN before an important client meeting in 20 minutes. He calls the IT helpdesk asking for urgent assistance so he can join the meeting on time. The support team needs to restore service as fast as possible.
**Which ITIL process should be used first?**

**Answer:** Incident Management

**Scenario 2**
For the last three Fridays, multiple employees on the third floor lose internet connectivity around 3 PM. Every week the issue is temporarily fixed by restarting a switch, but the problem returns again and again. Management now wants the permanent reason identified.
**Which ITIL process should handle this?**

**Answer:** Problem Management

**Scenario 3**
The company plans to upgrade antivirus software on 500 employee laptops next weekend. Because this could impact performance and user access, approvals, testing, scheduling, and rollback plans are required.
**Which ITIL process is most appropriate?**

**Answer:** Change Management

**Scenario 4**
A new employee joins the company on Monday. HR requests a laptop, email account, VPN access, and required software before the joining date. Multiple teams need to coordinate the request.
**Which support function usually acts as the first point of contact?**

**Answer:** Service Desk

**Scenario 5**
A banking application goes down during working hours. According to contract terms, critical outages must be acknowledged within 15 minutes and resolved within 2 hours.
**Which ITIL concept defines these timelines?**

**Answer:** SLA (Service Level Agreement)

**Scenario 6**
The support manager notices average ticket resolution time has increased from 4 hours to 9 hours over the last two months. He wants to analyze data and improve team performance.
**Which ITIL practice should be emphasized?**

**Answer:** Continual Improvement

**Scenario 7**
The company has 300 laptops, but nobody knows which employee owns which device, which warranties are expired, or which systems need replacement.
**Which management practice should solve this?**

**Answer:** Asset Management

**Scenario 8**
A payroll application update has been tested successfully in UAT. The business wants it moved to production Sunday night with minimum risk and downtime.
**Which ITIL practice is most relevant?**

**Answer:** Release Management

**Scenario 9**
Monitoring software sends alerts that disk usage on a production database server has reached 95%. Users have not yet reported any issue.
**Which ITIL operational practice is being demonstrated?**

**Answer:** Event Management

**Scenario 10**
The service desk receives a call from the CEO saying his laptop is not starting five minutes before a board presentation. Another employee has a printer issue at the same time.
**Which ticket should receive higher priority?**

**Answer:** CEO laptop issue

**Scenario 11**
A ticket is created for a password reset. The service desk logs the request, identifies it as an access issue, and routes it to the identity management team.
**Which stage of ticket lifecycle is happening?**

**Answer:** Logging, Categorization & Assignment

**Scenario 12**
An engineer receives a ticket saying “Application slow.” He checks server CPU, memory, network latency, and database performance to determine the cause.
**Which stage of ticket lifecycle is this?**

**Answer:** Investigation & Diagnosis

**Scenario 13**
After replacing a faulty monitor cable, the user confirms the display is working normally. The engineer updates notes and completes documentation.
**Which ticket stage should happen next?**

**Answer:** Close & Review

**Scenario 14**
Management wants to buy an expensive new ticketing tool immediately. The IT head suggests reviewing whether the current tool can be optimized first.
**Which guiding principle does this reflect?**

**Answer:** Start Where You Are

**Scenario 15**
Employees complain that getting software approval requires seven signatures and takes ten days. Leadership wants a faster and simpler process.
**Which guiding principle applies best?**

**Answer:** Keep it Simple & Practical

**Scenario 16**
The company plans next year's IT budget, hiring needs, hardware refresh cycle, and major service goals.
**Which value chain activity is this?**

**Answer:** Plan

**Scenario 17**
IT leadership conducts meetings with business heads to understand complaints, gather feedback, and discuss future needs.
**Which value chain activity is being used?**

**Answer:** Engage

**Scenario 18**
A company develops a new employee self-service portal and prepares training, testing, and launch plans before release.
**Which value chain activity best matches this?**

**Answer:** Design & Transition

**Scenario 19**
A support analyst resolves a password reset request during the first phone call itself without escalation.
**Which performance metric is positively impacted?**

**Answer:** MTTR (Mean Time To Resolve)

**Scenario 20**
A major outage affects the customer payment portal used nationwide. Business operations stop, and revenue is impacted immediately.
**What priority level is most appropriate?**

**Answer:** Critical / P1

**Scenario 21**
A change was deployed without approval, causing application downtime. Management wants a structured method to review, approve, and track future updates.
**Which ITIL process should be strengthened?**

**Answer:** Change Management

**Scenario 22**
A user reports that the laptop battery lasts only 20 minutes. IT checks asset age, warranty status, and replacement eligibility.
**Which practice is mainly involved?**

**Answer:** Asset Management

**Scenario 23**
The service desk notices many tickets are coming for forgotten passwords. They introduce a self-service password reset portal.
**Which ITIL objective is this helping achieve?**

**Answer:** Efficiency / Continual Improvement

**Scenario 24**
Every month, support team reviews incidents, customer feedback, SLA breaches, and recurring issues to identify improvement actions.
**Which ITIL concept does this represent?**

**Answer:** Continual Improvement

**Scenario 25**
A new CRM application is ready. Developers completed coding, testers approved it, and operations team must now deploy it with rollback readiness.
**Which ITIL practice is most relevant now?**

**Answer:** Release Management

---

Date: 19/04/2026

**Q1. A user says laptop is very slow. CPU usage is 95%. What would you check first?**

**Answer:** Running processes in Task Manager

**Q2. Windows update failed on 50 office PCs after deployment. What patch management mistake may have happened?**

**Answer:** Patch was not tested in a sample environment

**Q3. A server crashes every Friday night. How would you investigate?**

**Answer:** Check logs and scheduled tasks

**Q4. Users cannot save files because C: drive is full. What maintenance activities should have prevented this?**

**Answer:** Regular disk cleanup and monitoring

**Q5. Company data lost after ransomware attack. What backup strategy should exist?**

**Answer:** Regular offline and offsite backups

**Q6. One system has Chrome v120 while others have v126 causing compatibility issues. What concept is missing?**

**Answer:** Software consistency

**Q7. A disk shows SMART warning but system still works. What should IT team do?**

**Answer:** Replace disk and take backup immediately

**Q8. User reports internet slow only during meetings. What resource areas should be monitored?**

**Answer:** Network bandwidth and latency

**Q9. Application stopped after OS upgrade. What type of maintenance is needed?**

**Answer:** Adaptive maintenance

**Q10. Printer issue resolved after restart but happens daily again. What should technician do next?**

**Answer:** Find root cause instead of temporary fix

**Q11. Memory usage reaches 98% every afternoon on server. What can happen and how would you respond?**

**Answer:** System slowdown/crash; upgrade memory or optimize processes

**Q12. Backup files exist but restore fails during emergency. What lesson does this teach?**

**Answer:** Backups must be tested regularly

**Q13. A critical log shows repeated login failures at midnight. What may this indicate?**

**Answer:** Possible security attack (brute force)

**Q14. After installing patch, payroll software crashes. What process should have happened before deployment?**

**Answer:** Patch testing and validation

**Q15. Temporary files are consuming 30GB on employee systems. How would you solve long term?**

**Answer:** Schedule automatic cleanup tasks

**Q16. Disk usage alert triggered at 90%. Why are alerts valuable?**

**Answer:** They warn before system failure

**Q17. User says issue happens randomly and cannot reproduce it. How would you begin troubleshooting?**

**Answer:** Check logs and monitor system

**Q18. Company wants zero downtime during updates. What scheduling strategy should be used?**

**Answer:** Rolling updates or maintenance windows

**Q19. Server fan clogged with dust causing overheating. Which maintenance type applies before failure?**

**Answer:** Preventive maintenance

**Q20. System logs show service stopped exactly after antivirus scan starts. What is your next step?**

**Answer:** Check antivirus configuration/conflict

**Q21. Laptop battery backup reduced after years of use. Which maintenance category could improve usability?**

**Answer:** Perfective maintenance

**Q22. New accounting software needs Windows 11 but company uses Windows 10. What maintenance is needed?**

**Answer:** Adaptive maintenance

**Q23. Branch office has no offsite backup and building flood destroys systems. What rule was ignored?**

**Answer:** Offsite backup strategy

**Q24. User complains system hangs whenever many tabs are opened. What components should you inspect?**

**Answer:** RAM and CPU usage

**Q25. Manager asks why logs are important in troubleshooting. How would you explain with example?**

**Answer:** Logs record system events and errors; for example, if a server crashes, logs show exact time and cause.
